

CASE STUDY - WOKING BOLLARD INSTALLATION – PARKING RESTRICTIONS

The managing agents of this property approached us to install concrete bollards along a busy pathway to reduce parking on the busy junction into the estate. A review of the area and bollards to be installed took place with the client and his clients.

We recommended the introduction of 20 concrete bollards which has subsequently had the desired effect.

The bollards were chosen and sourced to match existing local ones and sourced prior to installation to avoid as much disruption on the property as possible whilst works were undertaken.

Once they were installed the cement mix applied had a resin colour applied to match the existing pathway.

The result is a large reduction in parking in this area and safe access for property owners and pedestrians

Target Maintenance GB Ltd were fully accredited throughout this works instruction. The accreditations include CHAS, Safecontractor and Constructionline.
